

GUARD RAIL PADDING MEASUREMENT FORM

PROJECT NAME: _____
 CUSTOMER: _____
 DATE: _____

Cross Out Rail Components that are Not Padded or Do Not Exist

Photos of Completed Guardrail System in Addition to Field Measurements Preferred

Guard Rail Segment as Viewed From Playing Field

If less than (4) panes exist, write "N/A" as the measurement.
 If more than (4) panes exist, please provide measurement in the table
 Begin at Pane 1 and proceed to the right.

Pane No.	Pane Measurement
5	
6	
7	
8	
9	
10	
11	
12	

NOTES:

1. Use of a caliper is recommended for diameter measurements.
2. If the rail is square, please provide the width as the "diameter."
3. Take all measurements from bare rails. Remove existing padding if necessary.
4. Any deviation from the following assumptions must be noted and treated as a custom situation: Uniform rail shape and size through out segment. Post heights and horizontal rail lengths are all equal. All Rail components are in plane with each other. Railing is not out of square and has predictable geometry
5. Rail systems that don't match this general configuration (including but not limited to rails with integral 90° returns) should be drawn and fully dimensioned for custom order processing
